

1st Week Report

Name: Sidorela Mema

Report Date: 04/03/2024

During the first week of the internship, I learned about:

1. BitBucket Resource (Version Control) [Resource Link](#)
2. Scrum [Resource Link](#)
3. Kanban [Resource Link](#)

The first assignment consists on version control:

- Clone the VC repo (<https://github.com/DataGlacier/VC.git>Links to an external site.)
- Create a new branch
- Checkout newly created branch
- Run the add.py and provide your name and fav sport as input
- Run the test script using below command:
- `pytest test/test.py -s`
- ignore warning and if there is no error then add,commit and push your changes to repo
- create pull request and assign to reviewer (If you are working in the group else push the changes to your own repo and submit the URL of that)
- If the reviewer approves then merge the changes to master (optional as this is individual assignment.)

Step by step instructions in how to solve the first assignment:

1. Clone the repository:
`git clone https://github.com/DataGlacier/VC.git`
2. Change into the cloned directory:
`cd VC`
3. Create a new branch:
`git checkout -b assignment 1`
4. Run the add.py script and provide your name and favorite sport as input:
`python add.py`
Follow the prompts to input your name and favorite sport.
5. Run the test script:
`pytest test/test.py -s`

6. Adding, committing, and pushing your changes:

```
git add .
```

```
git commit -m "Added my name and favorite sport"
```

```
git push origin assignment 1
```

7. Go to your forked repository on GitHub and create a pull request

Challenges: When I was trying to push to the original repository (DataGlacier/VC) I encountered a permission issue.

To solve that, I forked the original repository's page: DataGlacier/VC, this created a copy in my GitHub account. I cloned my Forked Repository in the terminal and followed the above steps.
